

listings.server.controller.js

- can make GET request to `listings.list`
- can make POST request to `getCoordinates`
- can make POST request to `listings.create`
- can make GET request to `listings.read`
- can make PUT request to `getCoordinates`
- can make PUT request to `listings.update`
- can make DELETE request to `listings.delete`

`router.param()` send the current `listingID` to `listings.server.controller.js` to be used by the `listingByID` function as middleware before functions are called
